

How do I learn coding. How much can I expect to learn the first night?

Shy Alon, I have been programming for most of my life

Updated Mar 16, 2015

Pack a laptop and travel to the north pole in the beginning of winter. You'll have a 6 months of a night to learn coding.

Once there - really just Google it. There are tons of excellent tutorials on the web.

OK, seriously and more to the point - you can't learn to write useful code in a single night. Even assuming that you are a highly intelligent person and understand the background disciplines of coding (algorithms, basic I/O etc) you'll take a few weeks to grasp the complexities of programmatic flow control, principles of adequate design and how to debug **when** (not if) things go south.
